Sustainable for Generations

The most environmentally friendly flooring available are authentic wood floors. Trees are a renewable resource and provide flooring that is sustainable for many generations. All Viking Hardwood Flooring products are made with raw material originating from sustainably managed forests.

Grown in the beautiful foothills of the Blue Ridge Mountains, 100% of our Appalachian hardwood is sourced from Verified Sustainable Hardwood Forests. New Traditional flooring not only exhibits a tradition of quality that comes from centuries of flooring history, but also utilizes cutting edge technology with a proprietary Six Side Seal©. This patented moisture barrier coats each surface, acting as a protective layer around the entire piece of flooring from manufacturing to installation for the life of the floor.

* Please remember that one of the beautiful properties of wood is that it is a product of nature and natural variations in color and grain pattern are to be expected. These color swatches are provided to assist you with general color selection and appearance but will not show all the characteristics of the final installed product. Multiple sample boards or a full carton of material will give you a more accurate representation.
